MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

APRIL 1937

TEMPERATURE

On Vancouver Island and in the southern interior valleys of British Columbia mean temperatures were generally about two degrees below normal. Along Lake Okanagan, however, temperatures were about normal while on the outer coast of Vancouver Island the deficiency was only one degree. In the upper Fraser valley and along the northern extension of the British Columbia coast temperatures were normal. Around the headwaters of the Peace River there was an excess of two to four degrees.

In Alberta in districts 5, 7, and 10 mean temperatures were seven to nine degrees above normal. In districts 1, 2, and 3 the excess was one to three degrees and in the Peace River area one or two degrees. Elsewhere in the grain region the excess was three to five degrees.

In Saskatchewan over the grain region the excess was two or three degrees for the most part but in districts 6 and 7 the excess was generally four to five degrees, while in district 4 the excess was four to seven degrees for the most part.

In Manitoba temperatures in the agricultural region were generally about normal although in districts 7 and 8 they were slightly below normal.

From the Manitoba boundary to Lake Nipigon and the north shore of Lake Superior temperatures were a little below normal and the same was true of the region of the lower lakes. From Lake Nipissing northward to James Bay and westward to the east coast of Lake Superior temperatures were above normal by two to five degrees.

Along the River St. Lawrence and the tributary valleys temperatures were in excess of normal. The excess was small in the region of Montreal but was two to four degrees between Lake St. Peter and Quebec City and about three degrees along the lower estuary and on Anticosti Island. Up the Saguenay to Lake St. John the excess was four to seven degrees except at the mouth of the Saguenay where the excess was only two degrees. Around the headwaters of the St. Lawrence the excess was two to four degrees but around the headwaters of the Gatineau only one to two degrees.

In Nova Scotia temperatures averaged about normal and in the interior of New Brunswick and on Prince Edward Island temperatures were in excess of normal by about one degree for the most part. Along the River St. Croix and in the upper valley of the River St. John some stations reported two or three degrees in excess of normal.

In the Yukon Territory temperatures three to four degrees in excess of normal were reported from Mayo and Dawson City. Along the lower Mackenzie River the temperature was one to three degrees below normal. Along the upper portion of the Mackenzie system from the Liard across Great Slave Lake to Lake Athabaska temperatures were four to nine degrees above normal.

On the west coast of Hudson Bay temperatures were five to eleven degrees above normal and on the east coast from three to six degrees above. At the outer entrance to Hudson Strait, Resolution Island reported temperatures about two degrees below normal.

On the east coast of Newfoundland temperatures were one or two degrees below normal but two to five degrees below normal on the west coast.

PRECIPITATION

In southern British Columbia precipitation was generally well above the normal amount except along the southern portion of Lake Okanagan and in the eastern portion of the Similkameen valley where there was a slight deficiency. On Vancouver Island excesses ranged from sixty to one hundred and ninety per cent. and in the lower Fraser valley and along Burrard Inlet from seventy-five to one hundred and forty per cent. Along the south Thompson excesses were from eighty to one hundred and eighty per cent. and in the upper Fraser valley from one hundred and thirty-five to two hundred per cent. In the northern part of the Okanagan valley excesses were thirty-five to fifty per cent. and at the extreme southern end of the valley two hundred per cent. In the Kootenays excesses were seventy to one hundred and forty-five per cent. but in the Kettle valley about twenty-five per cent. Along the northern extension of the coastline the amount differed but little from normal.

In Saskatchewan and Alberta precipitation was for the most part deficient. Exceptions were the Lesser Slave and Peace River country where there was an excess of twenty to sixty per cent. and the northern margin of agriculture in Saskatchewan where excesses ranged from thirty-five to one hundred and twenty-five per cent. Elsewhere in these two provinces the deficiency was generally fifty to seventy-five per cent. with some local exceptions however.

In Manitoba precipitation was exceptionally heavy except locally in the extreme northwestern portion of the grain region. In districts 1 to 9 of this province several points reported twice to three times the normal amount and others excesses of fifty-five to one hundred per cent.

From the Lake of the Woods eastward to Lake Superior precipitation was in excess of normal, particularly between the Lake of the Woods and Lake Nipigon where generally more than twice the normal amount was measured. From Lake Nipissing northward to James Bay some stations reported deficiency and others excess. In the region between the Georgian Bay and Lake Erie precipitation was well in excess of normal, particularly on the ridge between Lake Huron and Lake Erie where two to three times the normal amount was reported. Between Lake Ontario and the Ottawa River a few stations reported about the normal amount but mostly there were excesses of twenty to thirty-five per cent.

In Quebec, although there was an excess of precipitation along the upper St. Lawrence and in the vicinity of Montreal, precipitation as a whole was considerably deficient. Up the Gatineau and along the St. Maurice deficiencies of ten to seventy-five per cent. were reported and thirty-five to seventy-five per cent. along the Saguenay and around Lake St. John. Along the lower St. Lawrence to the Gaspé region the deficiency was sixty per cent. or more and on the Island of Anticosti twenty-five per cent. Harrington Harbour on the north shore of the gulf, however, reported an excess of thirty-five per cent.

In New Brunswick from the northern entrance of Northumberland Strait northward to the Bay of Chaleur and the Miramichi highlands the deficiency was seventy-five or eighty per cent., while along the upper portion of the St. John valley the deficiency was fifty to seventy per cent. In the lower St. John valley and along the north shore of the Bay of Fundy deficiencies were twenty-five to thirty-five per cent. for the most part. On Prince Edward Island the deficiency was about fifty per cent.

In Nova Scotia from the Strait of Canso westward to the Minas Basin there was a deficiency of fifty to seventy per cent. and along the south shore of the Bay of Fundy twenty-five to forty-five per cent. On Cape Breton Island the deficiency was about thirty-five per cent.

In Newfoundland there was a deficiency of fifteen to twenty-five per cent. for the most part, although at St. John's the deficiency was sixty-five per cent.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column Tm is the mean temperature of the month; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month.
